DETAILED ACTION

Claim Objections

Claim 1 is objected to because of the following informalities:

Claim 1, "printing colours" should be "printed colors"

Claim 2, "printing colour" should be "printed color".

Claim 1, "priming" should be "primer".

Claim 1, "matt" should be "matte".

Claim 6, "inking" should be "ink"

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the inks". There is insufficient antecedent basis for this limitation in the claim.

Claims 1-7 do not clearly and positively recite the method steps that applicant regards as the invention. Thus one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. For example, Claim 1 recites "a method comprising a varnishing machine..." The Claims should be amended to clearly recite the steps of the method performed such as "providing a primer varnishing machine" and "applying a finish varnish" "applying printing colors" "drying the printed colors" such that one skilled in the art would be reasonable apprised of the scope of the method recited.

Art Unit: 1792

Allowable Subject Matter

Claims 1-7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: The Prior Art of Record (See FR 2800317) teaches printing a matte ink and glossy ink having a glossy varnish. U.S. Patent 3,960,073 to Rush teaches overlay printing of cans. However, the Prior art fails to teach or render obvious a method for forming glossy and matte surface zones when printing a can body in a production line comprising: a priming varnishing machine for applying a priming layer to the can body, a printing machine for applying printing colors including at least one glossy color to the can body provided with the priming layer, and a finish varnishing machine for applying a finish varnish to the can body provided with the priming layer and printed, method characterized in that a matt varnish is applied as finish varnish, after drying of the inks, by means of a flexographic printing plate controlled by dot-for-dot marking or by means of a cylinder controlled by dot-for-dot marking, to the zones of the can body designed to give a matte surface.
